150mm

Net Weight
7.95kg

DELUXE HAND SINKS

UNIQUE FEATURES & COMPETITIVE STRENGTHS OF DSS HAND SINK SERIES

- The hand sink bowl is made by Deep Drawing Technology and **the entire hand sink unit is made of 1.2mm thick #304 stainless steel**, satin finishing while most competitors use only 0.8mm thick stainless steel.
- The entire hand sink body and the back penal are all welded artistically, smoothly and seamlessly into one complete hand sink unit for a much stronger and robust body while most competitors simply assemble the hand sink unit and the body together with screws which makes the hand sink unit/body fragile and cannot sustain the impact from any unforeseeable and unavoidable pounding or punching during transportation, leading to a bend and/or damage to the hand sink body.
- Water temperature (hot & cold) can be adjusted.
- All accessories for water connection are included.
- Depth of hand sink bowl is 150mm to prevent water from easily splashing out while most competitors' is only 130mm maximum.
- Stylish design makes the DSS series of hand sinks much more appealing and elegant.
- Deluxe models are artistically designed and engineered to have a much more eye-catching appealing effect.
- For all Electronic Controlled Faucet Hand Sinks, an All-in-One integrative brass tap is provided with a built-in infra-red activated control device for easy installation and operations.
- DSS hand sink unit can be easily and effortlessly mounted on wall with 4 prefixed wall-mounting holes in the back panel of the hand sink unit.
